Contents

1 Introduction 1

1.1 Liquid Crystals……1

1.2 Nematic Liquid Crystals……..1

1.2.1 Orientational Order Parameter…….2

1.2.2 Refractive Indices……5

1.2.3 Curvature Elasticity…….6

1.2.4 Dielectric Constants..……..7

1.2.5 Electrical Conductivity……9

1.2.6 Freedericksz Transition in Nematic Liquid Crystals……...9

1.3 Chirality…….10

1.3.1 Cholesteric Liquid Crystals……11

1.3.2 Bragg Reflection……12

1.4 Smectics…….13

1.4.1 Smectic-A (SmA) Liquid Crystals…….13

1.4.2 Smectic-C (SmC) Liquid Crystals…….14

1.4.3 Smectic-C* (SmC*) Liquid Crystals……...14

1.5 Topological Defects in Liquid Crystals…….15

1.5.1 Twist Grain Boundary (TGB) Liquid Crystals……..16

1.6 Preparation of Cell…….17

1.6.1 Cell Thickness Measurement…….18

1.6.2 Alignment of Liquid Crystals……...20

2 Effect of High Electric Fields on the N-I Phase Transition of a Nematic Liquid Crystal Exhibiting Large Negative Dielectric Anisotropy……23

2.1 Introduction……23

2.2 Theoretical Background…….25

2.2.1 Landau Theory of Phase Transitions…….25
2.2.2 Landau-de Gennes Theory for the Nematic to Isotropic (N-I) Phase Transition……26
2.2.3 Nematic-Paranematic Phase Transition in the Presence of an External Electric Field for a System with $\Delta\varepsilon > 0$ …….28
2.2.4 Macroscopic Quenching of Thermal Fluctuations of the Director……31
2.2.5 Nematic–Paranematic Phase Transition under an External Electric Field for a System with $\Delta\varepsilon < 0$ …….34
2.3 Experimental……..41
2.3.1 Results and Discussion……..45
2.3.2 Surface Induced Order……...58
2.3.3 Order Parameter Enhancement by the Field……..61
2.3.4 Variation of T_{PN} with Field: Inclusion of Director Fluctuations…….64
2.3.5 Order Parameter Susceptibility: Generation of third harmonic component of the electrical signal…….69
2.4 Conclusions……73

3 Enhancement of Orientational Order Parameter of Nematic Liquid Crystals in Thin Cells…….**77**
3.1 Introduction……77
3.2 Experimental……..80
3.3 Results and Discussion……..84
3.3.1 Quenching of Director Fluctuations in Thin Cells…….92
3.3.2 Landau de Gennes Theory of a Nematic Liquid Crystal Confined Between Two Plane Parallel Plates with a Large Surface Orientation Potential…….95
3.3.3 Confinement Induced Biaxiality……99
3.4 Conclusions……..102

4 Ionic contribution to the Dielectric Properties of Nematic Liquid Crystals in ThinCells…..……**106**
4.1 Introduction……..106
4.2 Experimental……107
4.3 Equivalent Circuit and Impedance Analysis……109
4.4 Experimental Results and Discussion……..110
4.4.1 Theoretical Analysis……113
4.5 Conclusions……..122

5 Some Experimental Investigations on Type-II Chiral Liquid Crystals……**125**
5.1 Introduction……..125
5.2 Electroclinic effect……...130
5.3 Experimental……132
5.4 Results and Discussion……135
5.4.1 Helical Pitch in the Cholesteric Phase…….135
5.4.2 Electroclinic Measurements…….137
5.4.3 Effect of a Strong Electric Field on the TGB_A Phase……..139
5.4.4 Freestanding Films……...140
5.5 Conclusions……..144

6 Theoretical Estimation of Structural Parameters of The Twist Grain Boundary-A Liquid Crystals……**147**
6.1 Introduction……..147
6.2 Energetics of a Single Screw Dislocation……149
6.3 Energetics of a Single Twist Grain Boundary…….151
6.4 Interacting Twist Grain Boundaries…….154
6.5 Conclusions……..158
