

INVITATION TO
Contemporary
Physics

2nd edition

Q. HO-KIM N. KUMAR C. S. LAM

Contents

<i>Preface</i>	v
1 Symmetry of Nature and Nature of Symmetry	1
1.1 What Is Symmetry That We Should Be Mindful of It?	1
1.2 Space-Time Symmetries: Invariance and the Great Conservation Laws	14
1.3 Reflection Symmetry	19
1.4 Gauge Symmetry	30
1.5 Spontaneous Symmetry Breaking (SSB)	33
1.6 Summary	38
1.7 Further Reading	39
2 Lasers and Physics	41
2.1 Invitation to the New Optics	41
2.2 Conventional Light Sources	42
2.2.1 Light and Electromagnetic Radiation	42
2.2.2 Spontaneous Radiation	45
2.2.3 Summary	48
2.3 What is a Laser?	48
2.3.1 Stimulated Radiation	49
2.3.2 Laser Action	50
2.3.3 Laser Light	52
2.3.4 Summary	54
2.4 Types of Lasers	55
2.4.1 Solid-state Lasers	55
2.4.2 Gas Lasers	56
2.4.3 Semiconductor Lasers	58
2.4.4 All Those Other Lasers	60
2.4.5 Summary	61
2.5 Applications of Lasers	61

2.5.1	Optoelectronics	62
2.5.2	Optosurgery	63
2.5.3	Communications	64
2.5.4	Holography	66
2.5.5	Summary	69
2.6	Quantum Optics	70
2.6.1	Atomic and Molecular Spectroscopy	70
2.6.1.1	Single-Photon Transitions	71
2.6.1.2	Multiphoton Transitions	72
2.6.2	Nonlinear Optics	74
2.6.2.1	Harmonic Generation	74
2.6.2.2	Phase Conjugation	76
2.6.3	Is Quantum Physics Real?	78
2.6.3.1	Delayed-Choice Experiment	80
2.6.3.2	To Catch an Atom	81
2.6.4	Summary	82
2.7	Looking Beyond	83
2.8	Further Reading	85
2.9	Problems	86
3	Superconductivity	89
3.1	Zero Electrical Resistance	89
3.1.1	Metallic Resistance	91
3.1.2	Superconductivity is Common	92
3.2	Infinite Magnetic Reluctance	94
3.3	Flux Trapping	96
3.4	Wholeness of Trapped Flux	97
3.5	Temperature and Phase Transition	98
3.5.1	Order Parameter	99
3.5.2	Free Energy and Entropy	99
3.6	Type I Superconductors	101
3.7	Type II Superconductors	102
3.8	The Critical Current	104
3.9	Understanding Superconductivity	105
3.9.1	Fermions	105
3.9.2	Bosons	107
3.9.3	Bose Condensation and Superfluidity	109
3.9.4	Phonon Mediated Attraction	109
3.10	Cooper Pairs and the BCS Theory	111
3.11	Some Macroscopic Quantum Effects	112
3.11.1	Flux Quantization Revisited	113

3.11.2	Josephson Tunneling and the Superconducting Interference	114
3.12	The Superconductor Comes out of the Cold	115
3.13	Summary	120
3.14	Further Reading	121
4	Bose–Einstein Condensate: Where Many Become One and How to Get There	123
4.1	Introduction	123
4.2	Bose Statistics: Counting of the Indistinguishables	126
4.3	Bose–Einstein Condensation (BEC): The Over-Population Crisis	128
4.4	Cooling and Trapping of Atoms: Towards BEC	131
4.4.1	Laser Cooling and Magnetic Trapping: Down to Microkelvins	132
4.4.1.1	Doppler Cooling	133
4.5	Doppler Limit and its Break-down	136
4.6	Trapping of Cold Atoms: Magnetic and Magneto-Optic Trap (MOT)	139
4.7	Evaporative Cooling	141
4.8	BEC Finally: But How Do We Know?	144
4.9	BEC: What Good is it?	146
4.10	Summary	148
4.11	Further Reading	149
5	Exploring Nanostructures	151
5.1	Towards the Bottom	151
5.1.1	Summary	153
5.2	The Rise of Nanoscience	153
5.2.1	Summary	155
5.3	Confined Systems	155
5.3.1	Quantum Effects	156
5.3.2	How to Make them	159
5.3.3	Summary	161
5.4	Quantum Devices	161
5.4.1	Quantum Wells	161
5.4.2	Quantum Wires	164
5.4.3	Quantum Dots	165
5.4.4	Summary	168
5.5	The Genius of Carbon	168
5.5.1	Carbon Fullerenes	168
5.5.2	Carbon Nanotubes	171
5.5.3	Summary	176

5.6	Spintronics	176
5.6.1	Spin Flow	177
5.6.2	Principles of Spintronic Devices	180
5.6.3	Magnetic Recording	182
5.6.4	Data Storage and Processing by Spin	183
5.6.5	Summary	186
5.7	Nanos at Large	186
5.7.1	Summary	189
5.8	Further Reading	190
5.9	Problems	191
6	Quantum Computation and Information	195
6.1	Introduction	195
6.1.1	Summary	196
6.2	Classical Computers	196
6.2.1	Summary	199
6.3	Quantum Computers	199
6.3.1	Introduction	199
6.3.2	Multiple Qubits	201
6.3.3	Summary	201
6.4	Quantum Gates	202
6.4.1	Summary	206
6.5	Deutsch's Algorithm	206
6.5.1	Summary	208
6.6	Finding the Period of a Function	208
6.6.1	Introduction	208
6.6.2	Implementing a Quantum Fourier Transform	209
6.6.3	Period of the Function from the Fourier Transform	210
6.6.4	Summary	210
6.7	Shor's Factorization Algorithm	211
6.7.1	Summary	212
6.8	Grover's Search Algorithm	212
6.8.1	Summary	215
6.9	Hardware and Error Correction	215
6.9.1	Trapped Ions	216
6.9.2	Photons	218
6.9.3	Nuclear Magnetic Resonance (NMR)	218
6.9.4	Other Systems	220
6.9.5	Summary	220
6.10	Cryptography	220
6.10.1	Private Key System	221
6.10.2	The RSA Public Key System	224

6.10.3	Summary	226
6.11	Quantum Teleportation	226
6.11.1	Summary	227
6.12	Further Reading	228
6.13	Problems	229
7	Chaos: Chance Out of Necessity	231
7.1	Introduction: Chaos Limits Prediction	231
7.1.1	The Butterfly Effect	233
7.1.2	Chaos is Common	234
7.1.3	Can Small be Chaotic?	238
7.2	Lesson of the Leaking Faucet	241
7.3	A Model for Chaos	243
7.3.1	The Logistic Map	243
7.3.2	Iteration of Map	244
7.3.3	The Period Doubling Bifurcation	245
7.3.4	Universality	247
7.3.5	Fully Developed Chaos	248
7.3.6	Poincaré Sections: From Continuous Flows to Discrete Maps	249
7.4	Strange Attractors and Routes to Chaos	250
7.4.1	Stable Fixed Point	250
7.4.2	Limit Cycle	251
7.4.3	The Biperiodic Torus	251
7.4.4	The Strange Attractor	252
7.4.5	The Hénon Attractor	253
7.4.6	The Lorenz Attractor	254
7.4.7	Routes to Chaos	256
7.5	Fractals and Strange Attractors	257
7.5.1	The Koch Snowflake	261
7.5.2	Cantor Dust	261
7.6	Reconstruction of the Strange Attractor from a Measured Signal: The Inverse Problem	263
7.7	Concluding Remarks: Harvesting Chaos	264
7.8	Summary	266
7.9	Further Reading	267
8	Bright Stars and Black Holes	269
8.1	The Basic Properties of Stars	270
8.1.1	Summary	273
8.2	The Hertzsprung–Russell Diagram	273
8.2.1	Summary	276

8.3	Bright, Shining Stars	276
8.3.1	Nuclear Sources of Stellar Energy	277
8.3.2	On the Main Sequence	279
8.3.2.1	The Proton-Proton Chain	281
8.3.2.2	The Carbon-Nitrogen Cycle	283
8.3.2.3	Properties of Stars on the Main Sequence	283
8.3.3	Solar Neutrinos	285
8.3.4	Post-Main-Sequence Evolution	288
8.3.4.1	Evolution of Low-Mass Stars	288
8.3.4.2	Evolution of High-Mass Stars	291
8.3.4.3	Supernovae	292
8.3.5	Summary	294
8.4	White Dwarfs	295
8.4.1	Observations of White Dwarfs	295
8.4.2	Electron Degeneracy Pressure	296
8.4.3	Mass and Size	297
8.4.4	Luminosity	299
8.4.5	Summary	299
8.5	Neutron Stars	300
8.5.1	Formation and Structure	300
8.5.2	Solitary Neutron Stars	304
8.5.3	The Missing Pulsars	307
8.5.4	Neutron Stars in Binaries	309
8.5.5	Summary	312
8.6	Black Holes	313
8.6.1	Gravitational Collapse	313
8.6.2	Black Hole Dynamics	318
8.6.3	Searching for Black Holes	322
8.6.4	Summary	324
8.7	Further Reading	325
8.8	Problems	326
9	Elementary Particles and Forces	329
9.1	Elementary Constituents of Matter	329
9.1.1	Summary	334
9.2	Fundamental Forces	334
9.2.1	Summary	339
9.3	Theory of Forces	339
9.3.1	Range and Mass	340
9.3.2	Inverse-Square Law versus Confinement	341
9.3.3	Spin and the Nature of Forces	342

9.3.4	Energy and Force	344
9.3.5	Summary	345
9.4	Quantum Numbers and Symmetry	345
9.4.1	Vectorial Quantum Numbers	346
9.4.2	Symmetry and Conservation Laws	347
9.4.3	Isospin	349
9.4.4	Color	349
9.4.5	Vacuum Condensates	350
9.4.6	Space Reflection and Charge Conjugation	351
9.4.7	Summary	353
9.5	Standard Model	353
9.5.1	Electromagnetic Theory	353
9.5.2	Yang–Mills Theory	355
9.5.3	Electroweak Theory	355
9.5.3.1	Higgs Mechanism	356
9.5.3.2	The Electroweak Interaction	356
9.5.3.3	Mixing of Neutral Gauge Bosons	358
9.5.3.4	W and Z Masses	358
9.5.3.5	Fermion Masses	359
9.5.4	Strong Interactions	360
9.5.4.1	Asymptotic Freedom	360
9.5.4.2	Confinement	362
9.5.5	Renormalization	362
9.5.6	Summary	365
9.6	Fermion Mixing	365
9.6.1	Quarks	366
9.6.2	Leptons	368
9.6.3	Neutrino Oscillations	369
9.6.4	Summary	372
9.7	Outlook	372
9.7.1	Grand Unified Theories	372
9.7.1.1	$SU(5)$	375
9.7.1.2	$SO(10)$	376
9.7.2	Supersymmetry	376
9.7.3	Extra Dimensions	378
9.7.4	Superstring and M Theories	380
9.7.5	Summary	380
9.8	Further Reading	385
9.9	Problems	385
10	Cosmology	387
10.1	Hubble’s Law	387

10.1.1	Velocity Measurements	387
10.1.2	Astronomical Distances	389
10.1.3	Summary	392
10.2	The Big Bang	392
10.2.1	Summary	393
10.3	After the Big Bang	393
10.3.1	Gravity and Pressure	393
10.3.2	The Red-Shift Factor in an Expanding Universe	395
10.3.3	The Accelerating Universe	396
10.3.4	The Critical Universe	397
10.3.5	The Dynamics	399
10.3.6	Summary	401
10.4	Before the Big Bang	401
10.4.1	Problems of the Classical Big Bang Theory	401
10.4.2	The Theory of Inflation	402
10.4.3	Summary	403
10.5	Thermal Physics	403
10.5.1	Equipartition of Energy	403
10.5.2	Stefan-Boltzmann and Wien's Laws	404
10.5.3	Baryogenesis	405
10.5.4	Relativistic Electrons and Neutrinos	405
10.5.5	Summary	406
10.6	MeV Temperatures	406
10.6.1	Neutrino Decoupling	407
10.6.2	Electron-Positron Annihilation	407
10.6.3	Temperature and Time	407
10.6.4	Big Bang Nucleosynthesis	408
10.6.5	Summary	411
10.7	The Cosmic Microwave Background (CMB)	411
10.7.1	Observation	411
10.7.2	The Physics of CMB	413
10.7.3	Summary	416
10.8	Further Reading	417
10.9	Problems	417
A	General Concepts in Classical Physics	419
A.1	The Physical Universe	419
A.2	Matter and Motion	422
A.3	Waves and Fields	429
B	General Concepts in Quantum Physics	435
B.1	Heisenberg's Uncertainty Principle	435

B.2	Wave Function and Probability: State of the System	436
B.3	Superposition of States and Wave Interference	438
B.4	Indistinguishability of Identical Particles	438
B.5	Quantum Mechanics and Naive Realism	439
C	Thermal Physics and Statistical Mechanics	441
C.1	Thermodynamics	441
C.2	Statistical Mechanics	443
C.3	Dimensional Analysis	448
D	Solutions to Problems	451
	<i>Glossary</i>	463
	<i>Index</i>	475

INVITATION TO **Contemporary Physics** (2nd edition)

This completely revised second edition of our hugely popular book invites the reader to explore ten of the most important areas of modern physics: Symmetry, Lasers, Superconductivity, Bose–Einstein Condensation, Nanoscience, Quantum Computation, Chaos and Fractals, Stellar Evolution, Particles, and Cosmology.

The new edition adds three new chapters in about a third of the book, covering the latest, hottest topics in contemporary physics: **Bose–Einstein Condensate: Where Many Become One and How to Get There:** Bose Statistics: Counting of the Indistinguishables; Bose–Einstein Condensation (BEC): The Over-Population Crisis; Cooling and Trapping of Atoms: Towards BEC; Doppler Limit and its Break-down; Trapping of Cold Atoms: Magnetic and Magneto-Optic Trap; Evaporative Cooling; BEC Finally: But How Do We Know?; BEC: What Good is it? **Exploring Nanostructures:** Towards the Bottom; The Rise of Nanoscience; Confined Systems; Quantum Devices; The Genius of Carbon; Spintronics; Nanos at Large. **Quantum Computation and Information:** Classical Computers; Quantum Computers; Quantum Gates; Deutsch's Algorithm; Finding the Period of a Function; Shor's Factorization Algorithm; Grover's Search Algorithm; Hardware and Error Correction; Cryptography; Quantum Teleportation.

The authors give a fascinating, up-to-date account of the exciting advances in these fast-moving fields. Their emphasis is as much on describing natural phenomena as on attempting to explain them in terms of basic principles, replacing equations with physical insight.

General readers and university undergraduates alike will find this unique book a useful guide to the worlds of modern physics, while the mature scientist will get an insightful survey of neighboring fields of research. For the teacher who takes a thematic approach to teaching physics, this book will be a complete source of current topics at the frontiers of research; and for the student, a valuable tool of study, made even more useful by numerous pertinent problems (with complete solutions) and references found at the end of each chapter.
